

Hazel Jiang

Address: 413 E Huron St | Phone: 617-697-5188 | Email: hazeljiang0107@gmail.com

Education

University of Michigan, Ann Arbor, MI

Sep 2022 - May 2026

Bachelor of Science in Information & Biopsychology, Cognition, and Neuroscience **Cumulative GPA: 3.660/4.0**

Coursework: Stats Modeling in R; Advanced Data Visualization; Data-Oriented Programming; Research Methods in Psychology; Usability Evaluation & Needs Assessment; Games and UX; Auto UX & Advanced Design; UX Capstone I

Skills&Activities

- **Technical Skills:** Python, SPSS, R, Arduino, C++, Figma, Rhino, Adobe Suite (Photoshop, Illustrator, InDesign), MS Office
- **Research & Prototyping:** Physical computing, sensor-based prototyping, usability testing with older adults, empathy modeling
- **Languages:** Mandarin (native), English (fluent), Cantonese (fluent)

Professional Experience

YiXin Group Limited | *UI/UX Design Intern* | Shanghai, China

May 2024 - Jul 2024

- Conducted structured UX research and usability testing with 40+ internal users, identifying pain points and implementing data-driven updates using Figma and Python-based survey tools
- Redesigned a company-wide mini-program with a focus on accessibility and interface clarity, reducing reported issues by over 10% through iterative prototyping
- Developed an interactive UI for the company's anniversary app using Figma, integrating real-time progress tracking and visual feedback mechanisms to enhance user motivation
- Collaborated with engineers to map out feature logic and feedback flow; supported digital rollout using internal sensor-based tracking tools and QR check-in systems

Personality Processes & Outcomes Laboratory (PPOL) | *Researcher Assistant* | Ann Arbor, MI

Jan 2025 - Present

- Managed and maintained **1,000+ participant records** in REDCap, resolving missing, inconsistent, and ambiguous records across participant datasets to maintain research-ready data quality.
- Built Python-assisted data cleaning workflows to standardize variables, identify incomplete records, and prepare coded datasets for lab review and downstream statistical analysis.
- Supported participant-facing research operations through study screening, compliance follow-up, and protocol-based communication. Collaborated with research staff to review study data, document recurring data-quality issues, and improve internal procedures for dataset preparation and research tracking.

Project Experience

Alfa Romeo Predictive Maintenance IVI System | *UX Designer* | Ann Arbor, MI

Sep 2025 - Jan 2026

- Designed an AI-driven predictive maintenance experience for the Alfa Romeo Tonale, translating vehicle health data across 5 critical component categories into severity-based alerts, diagnostic guidance, and service scheduling flows.
- Crafted an end-to-end maintenance journey spanning **4 driver touchpoints**, including IVI, HUD, voice interaction, and mobile, enabling users to move from issue detection to diagnosis and service booking within one connected workflow.
- Prototyped the complete maintenance funnel from alert acknowledgment to service booking, integrating estimated time-to-failure, component diagnostics, maintenance cost visibility, and nearby authorized service-center recommendations.

Holdless | *UX Designer & Product Manager* | Los Angeles, CA

Oct 2025 - Present

- Led product strategy and end-to-end UX design for an AI-powered calling assistant that helps non-native English speakers navigate high-stakes service and administrative calls. Defined conversational workflows, escalation logic, and proactive guidance patterns that anticipate user intent and support users through complex multi-step phone interactions.
- Translated user pain points into product requirements, interaction flows, and prototype specifications; partnered with technical collaborators to move the product from early concepts to a functional demo.
- Presented the product at the USC × UCLA New Venture Seed Competition, placing in the top 20% of participating teams.

Surveys of Consumers (SOC) Capstone Project | *UX Designer* | Ann Arbor, MI

Sep 2025 - Present

- Redesigned the information architecture and data exploration experience for the **University of Michigan Surveys of Consumers**, translating research findings into a search-first system spanning homepage, global search, reports, charts, tables, and data-release workflows.
- Conducted contextual inquiry and task-based usability testing with researchers, journalists, and institutional stakeholders; synthesized findings through affinity mapping to identify cross-site navigation, data interpretation, and information-discovery barriers.
- Designed and iterated low- to high-fidelity prototypes featuring a persistent **main vs data navigation model**, faceted search and filtering, interactive chart/table views, and contextual metadata to improve data findability and reduce cross-site friction.
- Developed a reusable design system and refined the prototype through iterative usability testing, improving metric context, direct data entry points, visual hierarchy, and information density based on observed user behavior.
